

Superstore Sales Analysis

Data Analyst Internship - Dashboard Insights & Recommendations

Tools used: Python, SQL and Excel dashboard | Deliverable: 2-page insight report

Executive Summary

The Superstore analysis covers 4,922 unique orders and 793 unique customers. The dashboard is designed to compare sales by category, region, customer segment, sub-category and month. In the supplied pivot-chart export, the clearly populated values are Furniture sales of 728,658.58, Central-region sales of 492,646.91, Consumer-segment sales of 1,148,060.53, one sub-category value of 113,813.20, and Apr-2015 sales of 27,906.86. These visuals provide useful direction, but the chart ranges should be validated because several comparison bars appear unpopulated in the exported dashboard.

4,922	793	728,658.58	1,148,060.53
Unique Orders	Unique Customers	Furniture Sales*	Consumer Sales*

Key Findings

1. Category signal: Furniture

The visible category value is 728,658.58 for Furniture. This is a meaningful sales concentration to monitor, but the Office Supplies and Technology bars should be rechecked before calling Furniture the overall leader.

Sales by Category

Sales by Sub-Category

2. Customer signal: Consumer

The Consumer segment shows 1,148,060.53 in visible sales, indicating a large customer base for retention and repeat-purchase campaigns. Corporate and Home Office values should be confirmed in the pivot source.

Sales by Segment

From Dashboard to Action

Three specific recommendations based on the analysis

Recommendations

1. Validate the dashboard ranges before business decisions

Finding: Several exported comparison charts show only one populated bar.
Action: Rebuild every pivot-chart source range and confirm that all categories, regions, segments, sub-categories and months are included. Reconcile dashboard total sales to source-data total before interpreting leaders.

2. Build a Consumer x Furniture drill-down after validation

Finding: Visible sales are 1,148,060.53 for Consumer and 728,658.58 for Furniture.
Action: Track order count, average order value and repeat purchases for this combination. Maintain stock for confirmed best-selling sub-categories and test focused Consumer promotions; review performance weekly.

3. Add a monthly and regional performance routine

Finding: Central shows 492,646.91 and Apr-2015 shows 27,906.86 in the supplied visuals.
Action: Add month-over-month growth and region contribution % to the dashboard. Flag below-average periods or regions for targeted offers, and plan inventory/campaign budgets ahead of stronger periods.

Supporting dashboard views

Sales by Region

Central: 492,646.91 visible sales

Sales by Trend

Apr-2015: 27,906.86 visible sales

Conclusion

The Superstore Sales Dashboard provides a clear overview of sales performance across categories, regions, customer segments, sub-categories, and monthly trends. The analysis helps identify sales patterns and areas that require attention. These insights can support better inventory planning, targeted marketing campaigns, and regional sales strategies. Overall, this project improved my practical skills in Excel, data analysis, and business reporting.
